

The FRAGILE commitment

FRAGILE Group will target a number of challenges bringing together public and private stakeholders to integrate in older adults daily life innovations in the prevention and management of frailty. As envisaged by the Frailty Decalogue, through EU-financed, national and regional projects, the FRAGILE Group will actively work on: i) enhancing the use of technologies to enable independence and foster wellbeing in older adults; ii) improving the identification of people at increased risk of frailty, functional and cognitive decline; iii) using technologies to prevent cognitive decline and frailty; iv) reducing the institutionalizations by improving the quality of homecare services. In addition, specific projects of the Group will focus on the educational and training dimension, trying to fill the gap between the actual skills of healthcare practitioners and those demanded by older adults and their families.

SI4life related activities: financed project

CARESS Project (Erasmus + Programme SSA– Nov 2015-Oct 2018) targets the “skill gap” in the field of older adults homecare, providing a clear picture of the main roles, skills and curricula characterizing *Homecare Professionals* and providing tools for overcoming them, such as a free web-based EU Framework supporting Vocational Education and Training (VET) designers.

ENhANCE Project (Erasmus + Programme SSA– Jan 2018-Dec 2020) main scope is to define an EU curriculum for *Family and Community Nurses (FCN)* by targeting the existing mismatch between the traditional curriculum of nurses working in Primary Health Care (PHC) and the skills actually demanded by both public health care institutions and private service providers applying innovative healthcare models centered on PHC.

proposals under evaluation

DIGI2AGE (H2020-SC1-DTH-2018-2020): it is a CSA aiming to build a collaborative cross-border ecosystem to exchange knowledge, within different international key stakeholders, outline future impacts and optimum approaches in using ICT to address the global challenge of active health aging.

engAGE (H2020-SC1-DTH-2018-2020): it is a RIA project aiming at the development a new ICT infrastructure to reduce early retirement by nurses mainly due to burnout causes.
